| • PHP, Laravel | |

EXPERIENCE

Korlie Limited, Mar 2023 - Continue

Software Engineer

- As part of the company's core development team, my role ranges from designing prototypes to building web applications that solve the needs of the company and its clients. I work on both frontend and backend of their products, including the company's key product called Tenkipay, a fintech application.

EDUCATION

Nano Degree, Aug 2022 - Nov 2023

Alx

- I spent a year with ALX pursuing a nano degree in software engineering, which I proudly obtained. During this period I got to learn about key tech concepts like basic networking and got a period of three months to specialize in backend web development. I also worked on many projects among which the major ones are the 'Save Your Home Weather' app and the 'Climate Call' app that I designed and built.

PROJECT DETAIL

PELE

- A real estate web application designed and built to solve the problem of fraud and limited accessibility in the real estate industry for middle and high income families living in Sierra Leone. It's built with Laravel and includes key features such as property management system and advanced search filters.

WanGov

- This is an official project, of which I am part of the core development team. It's a web application that digitises government services in Sierra Leone. It features applications for government services and payment for these services. The app is currently in use by hundreds of Sierra Leoneans and has had a significant impact on the efficiency and delivery capacity of government institutions whose services are listed on the app.

Climate Call

- This is the version two of the Save your home weather app with more features and functionalities. Built with PHP, JavaScript, Laravel, Tailwindcss, MySQL. Some features: Search Bar, search history, search results list, user authentication and authorization, community chat that supports comments, plantcare guide etc.

Tenkipay

- TenkiPay is a secure online payment platform for individuals, enterprises, and organizations located anywhere. It integrates all your digital wallets (mobile money, bank accounts, etc) for easy transactions, creating a direct link between the service provider and the beneficiary. This is a company product of which I am part of the core of the development team.

BitConvert Pro

- BitConvert Pro is a web application designed and built to convert binary numbers into decimal, hexadecimal and octal numbers. It's a team project developed in year one semester two. For

this project, I was the lead developer. Key Features: Binary conversion system, search history, user authentication and authorization.
